

ABSTRACT

The present invention discloses a merchandise package capable of presenting a three-dimensional image. An image A is disposed on one surface 11a of two surfaces of a merchandise package 11 and an image B is disposed on the other surface 11c thereof so that a three-dimensional image is formed by the images A and B becoming a pair. When 10 the images A and B are juxtaposed while being paired, the two images provide a three-dimensional image to an observer. With this, novel distinguishing ability is given to the merchandise package and a customer who purchases the merchandise can enjoy the three-dimensional image by juxtaposing the merchandise packages, and thus a novel function is given to the 15 merchandise package.
